

ASCCC Area A Report 10/13/2017  
By Deborah Rosenthal

On Friday, October 13<sup>th</sup> at the ASCCC Area A meeting it was announced that the articulation between UC and CCC in chemistry and physics is going well. This would not be with just one UC, but the entire system. There would only be one uniform set of classes required to ensure transfer as a junior.

It is not a "done deal" yet. We are waiting on the final decision of the UC chancellor, or other administrator, to agree. There is a little reluctance at this time. It may, or may not, pertain to quality and rigor at our level.

John Stankas, ASCCC Rep (Professor of Chemistry), is a major lead. I have e-mailed him to ask if there is anything we can do. My personal feeling is that this is the most important factor in pathways for our physical science students.
